

Conquest Web Application Exploit Tool

*Daniel Zhang, Abhi Rathod, Tanner Harper,
Asad Mahdi*

Overview

- ▶ Automates SQL/XSS attack when provided with target domain:
 - ▶ Reconnaissance
 - ▶ Vulnerability Checking
 - ▶ Exploitation
- ▶ Authorized Mode
- ▶ Python 3.6
 - ▶ Requests
 - ▶ BeautifulSoup

Modules: Recon

- ▶ Gathers all live web pages from the target url
 - ▶ Crawler - Follows HTML links recursively
 - ▶ Forced Browse - Uses popular files and directories list to access pages not referenced by an application
- ▶ Authenticated mode
 - ▶ Will attempt to authenticate given credentials and crawl for pages only accessible once logged in

Modules: Vulnerability Checking

- ▶ Probe live pages
 - ▶ Parses HTML - Inserts multiple XSS and SQL strings into input fields and POSTS
 - ▶ Exhibited vulnerabilities marked for further exploitation

Modules: Exploitation

- ▶ User given options to exploit vulnerable pages
- ▶ XSS
 - ▶ iframe
 - ▶ Redirect
 - ▶ Cookie theft
- ▶ SQL
 - ▶ Authorization bypass
 - ▶ Table enumeration

Improvements

- ▶ Expand SQL coverage beyond SQLite
- ▶ Add breadth
 - ▶ Command injection
 - ▶ CSRF
 - ▶ RFI/LFI
- ▶ Add depth
 - ▶ More XSS (stored/reflected)
 - ▶ More SQL payloads
